> ABOUT

Hi. I'm **Allahverdi**, also known as **Net User**.

I'm growing toward DevOps and focused on Linux infrastructure, automation, and self-hosting. I believe the internet should remain open and private, so I build tools that give people more control over their data and the ability to self-organize with each other.

I created **GhostProvider**, a TUI for automated self-hosting that scans GitHub repositories, analyzes their deployability, and deploys services as systemd user-level units. It currently supports Python, Node.js, Go, Rust, and static sites.

My focus is on automation, local-first infrastructure, and making self-hosting simpler.

> PROJECTS

GhostProvider

GitHub

TUI for self-hosting & localhost management. Paste a GitHub URL, get a deployability score, and deploy as a systemd service — all from one terminal. No Docker required.

- Python
- Textual
- systemd
- GitHub API

> SKILLS

INFRASTRUCTURE

- Linux server administration
- systemd services
- Docker
- Podman
- process / service management
- networking diagnostics
- SSH
- DNS
- port management

SELF-HOSTING

- application deployment
- service isolation
- cleanup / lifecycle management
- local infrastructure

AUTOMATION

- Bash scripting
- Python automation
- GitHub API
- deployment automation
